**Grade 2 - Lesson 4**

Create a PowerPoint™ (or another applications') presentation (less than 5 slides) from template

1. Using a pre-made template, such as the one shown, students can include their text.

2. Pre-planning is a must to make this a successful project. If you have the title, text and images already in draft form, and any images needed saved in a folder, the assembly of the presentation will flow smoothly, limiting the amount of assistance students will need.

3. Using the OCR Camouflage Unit as an example, students can prepare a draft for each type of camouflage they which to describe, or type of animal that uses camouflage, and how it uses it to its benefit. The title for a slide could be **"Walking Stick"**, the text could be the description of the animal and its use of camouflage, and the image could be one either that the student drew and saved using KidPix, or some other graphics program, or an image the student found on line.

4. When multiple slides are used, students can create slide transitions, as described in the previous lesson.
